

New GoGuardian Features

As GoGuardian continues to improve features available for schools, details will be provided in this document.

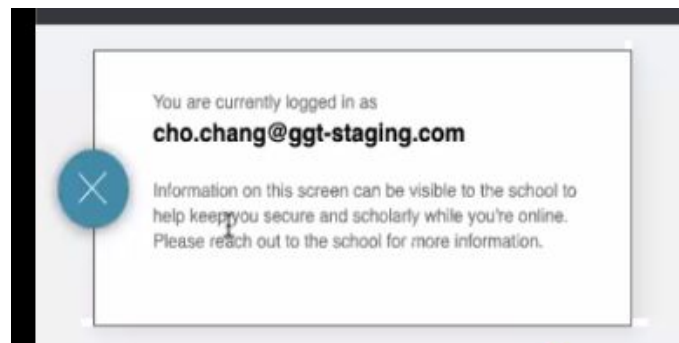

Notify End Users When GoGuardian is Active

This feature provides students with a constant reminder when GoGuardian management tools are being applied to their accounts.

Students will see this blue school house icon on their screens. It defaults to the top left corner of the screen but can be relocated as desired.

When they first log in it shows them that they are logged in and GoGuardian is active. They can click the icon to display this information at any time.

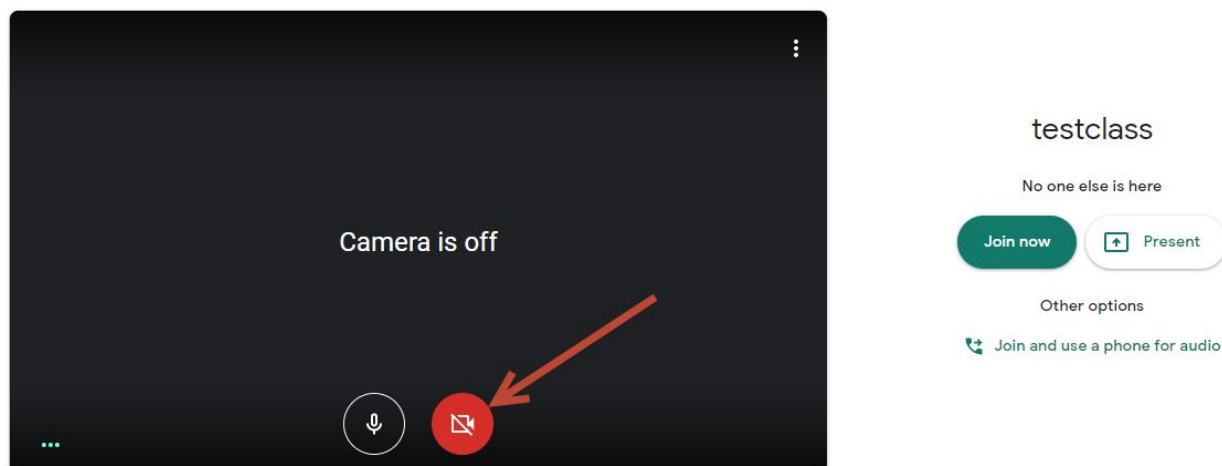

This icon will only appear when students log in to the Chrome browser on personal devices or District issued Chromebooks with their CCSD Google accounts. This will NOT affect other devices (iPads, etc.) or other browsers (Firefox, Edge, Safari, etc.).

New GoGuardian Features

Camera Default to OFF

This feature overrides the default setting of Meet (camera on) by turning the camera off by default and requiring the student to affirmatively turn on the camera to participate in a video meeting.

Please note:

- This change will take effect when students log in to a Chrome browser on a personal device or a District issued Chromebook with their CCSD Google account. This will NOT affect other devices (iPads, etc.) or other browsers (Firefox, Edge, Safari, etc.).
- This feature will not disable the camera on the device itself. Any other applications or websites that utilize the camera will continue working as they currently do.
